Complete Argus
Migration Solution

Out-of-the-Box Solutions Designed to Keep You From Going Out Of Your Mind Migrating Data to Oracle Argus

Today, Oracle Argus Safety is quickly becoming the platform of choice for pharmaceutical safety data management. Now when you make that kind of investment you can't afford errors in the migration of legacy data. So why use a process that admits it will have them?

Surveys show that 40% to 60% of data migrations go over budget and/or over schedule. And many migrations go through 6 to 9 testing iterations just to get to the point where they "think" it's close enough to move to production.

These statistics are even more disheartening when you consider that most companies who bid to do your data migration will only include 2 rounds of testing. And each time they'll only test a sample of your total data.

Now if all your data is perfect, then using this approach for your migration will be fine. But what are the chances your data is perfect?
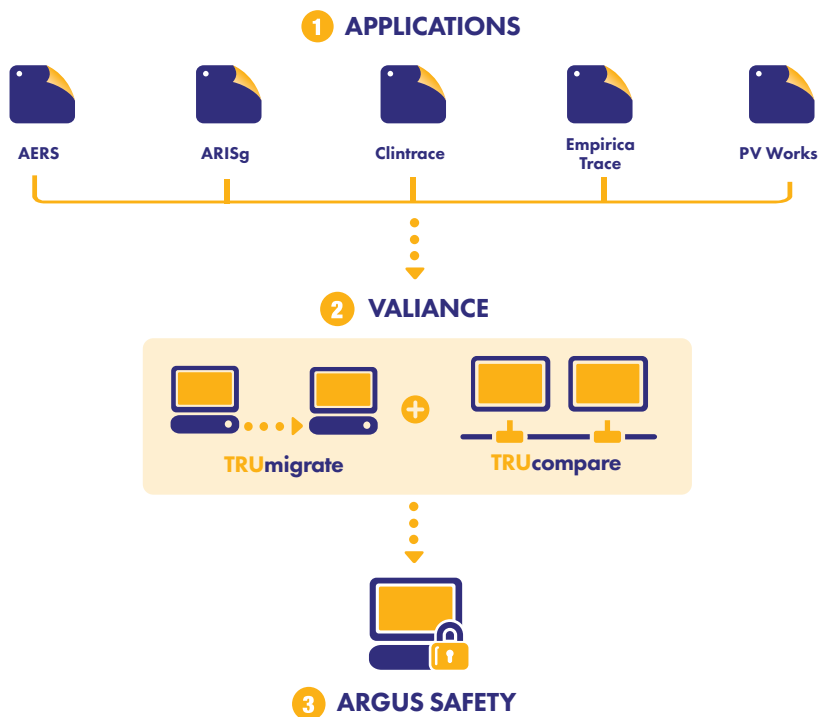

To make your investment worthwhile you need to be certain your migration will be successful. That's where Valiance comes in. We offer the only complete migration solution for Argus. **If you're using Oracle Argus Safety, getting the data from the source to the destination with 100% verification will never be an issue with Valiance.**

Our complete out-of-the-box migration solution requires no SQL scripts or custom coding. It eliminates downtime typically associated with migration activity. And provides 100% end-to-end testing to identify error. But the best part is, we offer it all for about the same cost as other migration processes that only provide best guess sampling.

Complete Argus Migration Solution

Complete **Argus Migration Solution:**

- ⊘ Standard fields pre-configured out-of-the-box

- ⊘ Out-of-the-box support for AERS, ARISg, Clintrace, Empirica Trace, PVWorks and all prior versions of Argus

- ⊘ Migration InSight: proven migration methodology for safety data

- ⊘ Mapping specification template

- ⊘ Out-of-the-box validation document set

- ⊘ Code list management

- ⊘ De-duplication (if necessary)

- ⊘ Test 100% of migration dry runs and user-driven remediation

- ⊘ 100% testing for validation and production migrations

- ⊘ Pre-migration testing for early error detection

1 APPLICATIONS

AERS   ARISg   Clintrace   Empirica Trace   PV Works

2 VALIANCE

TRU**migrate**   +   **TRU**compare

3 ARGUS SAFETY

Since 2005 Valiance's migration software TRUmigrate and TRUcompare have been successfully applied to over 500 GxP data migrations. So if you want to avoid program delays, "surprise" quality issues late in the migration process, budget overruns, and migration errors, call **800.880.4540** and talk to Valiance. Our out-of-the-box solutions will keep you from going out of your mind during your next data migration.
